I) Carefully remove the original exhaust from the bike.

J) Loosely install the Scorpion headers using the original header bolts. You will fully tighten them in a later step.

K) Slide the collector onto the headers with the lambda sensor boss facing outwards.

L) Slide the connecting pipe onto the collector and align the bracket with the mounting point on the frame.

M) Secure in place with the original mounting bolt. Leave loose for now, you will fully tighten in a later step.

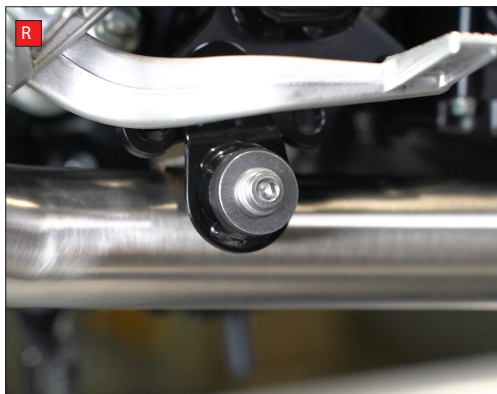

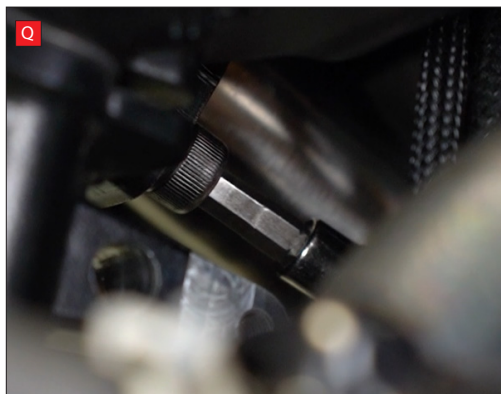

N) Attach the silencer mounting bracket to the back of the rear foot rest using the supplied hardware. Do not fully tighten yet, you will do this in a later step.

O) Slide the Scorpion silencer onto the connecting pipe and align with the mounting bracket.

P) Secure in place with the supplied hardware. Do not fully tighten yet, you will do this in a later step.

Q) Adjust the exhaust system so that it fits correctly and is away from any moving parts then fully tighten the header bolts.

NOTE: It's important that you tighten the bolts evenly to ensure the collars seat correctly against the gaskets in the head.

R) Fully tighten the connecting pipe mounting bolt.

S) Fully tighten the silencer mounting hardware.

T) Fully tighten the silencer mounting bracket bolts.

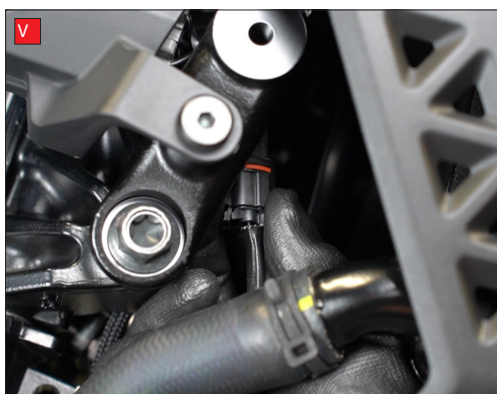

U) Screw the lambda sensor into the boss and fully tighten.

V) Feed the lambda cable along its original route and plug back into its connector behind the radiator.

W) Re-install the radiator support bracket and clip the cables back in to the guide.

X) Secure the lambda sensor cable to the engine with the supplied cable tie.

When fitted take bike for a short ride to ensure all functions are correct. When bike & exhaust are cool enough check all nuts and bolts are still secure.
